

Ethernet & VPN: EPL, IP VPN and VPLS services

Connect your remote premises and exchange your corporate data in the most efficient and secure way

RETN Ethernet & VPN services offer redundant and protected carrier Ethernet and IP VPN solutions with dedicated scalable bandwidths, when you need to link your geographically dispersed sites or gain access to all of the systems and applications for those employees working remotely. Our Juniper based MPLS network is built over a high-capacity DWDM system, owned and operated by RETN, providing the highest level of resiliency, scalability, control and security, allowing you to fully concentrate on your company performance. Our extensive network and metro coverage offers different types of configurations to support a wide range of business requirements.

Standard Service Features

Feature*	 EPL	 VPLS	 IP VPN
Description	Layer 2 point-to-point VPN	Layer 2 multipoint-to-multipoint VPN Multiple sites connected	Layer 3 point-to-multipoint VPN Multiple sites connected
Interface types: 10/100/1000Mb, 10G, 40G, 100G	•	•	•
VLAN Trunk Support for multiple services delivered on one port	•	•	•
MTU 9000 Bytes by default	•	•	x
